

ABSTRACT OF THE DISCLOSURE

This invention provides compounds of Formula (I):

I

- wherein R¹ and R² are independent substituents or are fused to form spirocyclic rings;
R³, R^C, and R⁴ are as defined herein; and R⁵ is a substituted benzene ring or a
5 substituted five or six membered heterocyclic ring having in its backbone 1, 2, or 3
heteroatoms including O, S, SO, SO₂ or NR⁶; or pharmaceutically acceptable salt
thereof, as well as pharmaceutical compositions and methods using the compounds as
antagonists of the progesterone receptor.
